INSTRUCTIONS

To measure for an arm sleeve, place the locator tape so the blue dot (0) corresponds to the location of the wrist, with the one through thirty extending up the arm. Proceed to measure circumferences with a measuring tape at each inch interval up the arm.
 If a shoulder flap is needed on the sleeve, measure the length from the last arm circumference at the axilla line up and over the acromion to the neck side of the bra strap for the flap, and measure diagonally from the tip of the shoulder across the chest to the waist on the opposite side for the strap.
