To measure for a lower extremity support, place the locator tape on the leg positioned so the (0) corresponds to the location indicated on the diagram above. Proceed to measure circumferences at every inch interval up the leg to desired length of the garment, and down to the toes, stopping at the metatarsal head. These are then recorded under LEG CIRCUMFERENCES on the order form with the negative numbers corresponding to the foot measurements and the positive numbers to the leg measurements.

If a leotard is needed, the body measurements are recorded in the box marked TORSO MEASUREMENTS.

Torso Measurements	Body Circumferences	Heights (from floor)
Top of support (above waist)	38	43
Waist	37	42
Midpoint between 35&37	36	41
Largest part of buttocks	35	40
Proximal thigh left	34	
Proximal thigh right	33	
Fold of buttocks to floor		39
